I claim:

- Claim 1. A flow-through oxygenator comprising an emitter for electrolytic generation of microbubbles of oxygen comprising an anode separated at a critical distance from a cathode and a power source all in electrical communication with each other, wherein the emitter is placed within or adjacent to a conduit for flowing water.
- Claim 2. The emitter of claim 1 wherein the anode is a metal or a

 metallic oxide or a combination of a metal and a metallic oxide and the anode is
 platinum and iridium oxide on a support and the cathode is a metal or metallic oxide
 or a combination of a metal and a metallic oxide.
 - Claim 3. The critical distance of claim 1 which is 0.005 to 0.140 inches.
 - Claim 4. The critical distance of claim 1 which is 0.045 to 0.060 inches.
 - Claim 5. The product of claim 1 wherein the water is supersaturated with oxygen and of an approximately neutral pH.
 - Claim 6. A method for enhancing growth and yield of plants comprising the administration of supersaturated water on said plants.
- Claim 7. The method of claim 6 wherein the supersaturated water is delivered to the plants in hydroponic culture or through drip irrigation.
 - Claim 8. A method for treating waste water comprising passing the waste water through a conduit comprising the emitter of claim 1.
